KRISHNA KARKI

JUNIOR AI ENGINEER | PYTHON BACKEND | LLM & RAG SYSTEMS

krishnakarki1996@gmail.com | Kathmandu, Nepal | GitHub | LinkedIn | X

SUMMARY

Junior AI Engineer with professional experience building LLM-powered applications and backend services using Python and FastAPI. Experience with Retrieval-Augmented Generation (RAG), vector databases, asynchronous processing, Redis-based token tracking, and web data ingestion. Built AI applications including a travel assistant and document-based question-answering systems, with a focus on practical backend and AI system development.

TECHNICAL SKILLS

Languages: Python
Backend: FastAPI, REST APIs, asynchronous processing
AI / LLM: RAG, LLM integration, embeddings, vector search
Databases / Storage: PostgreSQL, pgvector, Redis, Weaviate
Data Ingestion: Crawl4AI, Selenium, web scraping
Tools: Git

EXPERIENCE

AI Engineer | Dignep Group P.V.T. L.T.D. Jun 2025 - Jan 2026

- Developed an AI-powered travel assistant chatbot using LLM-based application workflows.
- Built asynchronous backend services using FastAPI for AI application processing.
- Implemented Redis-based real-time token tracking for monitoring LLM usage.
- Integrated Weaviate as the vector database for retrieval workflows.
- Built web data-ingestion workflows using Crawl4AI and Selenium for dynamically rendered websites.

AI Engineer Intern | Dignep Group P.V.T. L.T.D. Mar 2025 - Jun 2025

- Worked on Retrieval-Augmented Generation (RAG) systems.
- Developed FastAPI-based backend services for AI applications.
- Worked with vector databases as part of retrieval pipelines.

PROJECTS

Context Aware Assistant

- Built a document-based question-answering system using Python and FastAPI; implemented vector search with PostgreSQL/pgvector, optimized document chunking and embedding workflows, and integrated an LLM for real-time question answering.

Deep Web Scraper + Structured Markdown Generator

- Built a deep-crawling pipeline for dynamically rendered web content; converted scraped HTML into structured Markdown for downstream AI/RAG ingestion and preserved website directory structure.

Token Logging System

- Implemented Redis-based real-time token tracking and asynchronous FastAPI processing for token-logging workflows.

EDUCATION

Bachelor of Computer Applications | Madan Bhandari Memorial College | Kathmandu, Nepal | Jan 2022 - Present

TRAINING & CERTIFICATIONS

Introduction to Generative AI - Google Cloud (Jan 2024)
Introduction to Data Science - Cisco (Jan 2024)
